Education

University of California, Davis — Davis, CA
Bachelor of Science in Computer Science — *Sept. 2021 – March 2023*

Experience

Robert Half — Apr. 2023 – Present
Software Engineer II — *Menlo Park, CA*

- Leading complete architectural transformation of enterprise AI platform from monolithic specialized agents to fully agentic (multi-agent) system with Ambient Agents integration and flexible orchestration, implementing Azure AI Agents and Microsoft Semantic Kernel while directing cross-functional teams.
- Building the platform's first multi-agent accelerator from 0-1 (idea to production), accelerating practice employee onboarding onto key engagement projects.
- Led and shipped internal AI platform from 0-1, scaling to serve 20+ departments with 2+ million interactions, reducing information retrieval time by 40% and maintaining 99.9% uptime while generating over $5M in revenue to date.
- Mentored 4+ interns and multiple junior engineers, conducted technical interviews, influenced hiring decisions, and ensured delivery excellence as technical lead during high-intensity development cycles.

Software Engineer Intern — *Jun. 2022 – Mar. 2023*

- Implemented major frontend updates for key internal applications using React and Angular, improving data tracking processes and user experience for business stakeholders across multiple departments.
- Designed and executed proof-of-concept for optimizing data lake migration between cloud services, achieving 25% reduction in data transfer times through Azure DevOps pipelines and Azure Data Factory optimization.
- Actively participated in Agile team ceremonies, documenting comprehensive system architecture and API integrations to boost team collaboration and knowledge sharing across engineering teams.

CodeLab — Feb. 2022 – May 2022
Software Developer — *Davis, CA*

- Led frontend modernization of critical internal applications using React and Angular, streamlining data tracking workflows and improving user experience across 5+ departments.
- Designed and executed proof-of-concept for optimizing data lake migration between cloud services, achieving 25% reduction in data transfer times through Azure DevOps pipelines and Azure Data Factory optimization.
- Created comprehensive system architecture documentation and API integration guides, accelerating team onboarding and reducing cross-team integration time by establishing clear technical standards.

Lawrence Berkeley National Laboratory — Jun. 2021 – Aug. 2021
Software Engineer Intern — *Berkeley, CA*

- Engineered lossless compression algorithm using time-series analysis techniques, achieving 66% improvement in temperature sensor data transmission efficiency for environmental monitoring systems.
- Enhanced research data infrastructure by optimizing storage and transmission protocols, enabling more efficient environmental data collection and analysis workflows for laboratory research applications.
- Presented algorithmic research findings and implementation methodology to research team, demonstrating technical communication excellence and research validation capabilities.

Technical Skills

Programming Languages: Python, C#, JavaScript, HTML/CSS
AI/ML Frameworks & Libraries: OpenAI APIs (Assistants, Responses, Agents), Semantic Kernel, Azure AI Agents
Cloud Platforms & Services: Azure Cloud, Azure DevOps, Azure AI Foundry, Azure ML Studio
Web Frameworks & Libraries: React, Angular, .NET, Redux, Node.js
Infrastructure & DevOps: Docker, Kubernetes, CI/CD pipelines, Azure deployments, MLOps
Developer Tools: Git, Visual Studio, VS Code, Jupyter Notebooks
Data & Analytics: RAG systems, Vector databases, Time-series analysis
Security & Quality: SonarQube, Azure Code Scan, Authentication protocols, Audit logging
