EDUCATION

University of California, Davis
Bachelor of Science in Computer Science

Davis, CA
Sept. 2021 – March 2023

TECHNICAL SKILLS

Languages: Python, C# , JavaScript, HTML/CSS
Cloud Platforms & Services: Azure AI Agents, Azure Cloud, Azure DevOps, Azure AI Foundry, Azure ML Studio
Frameworks & Libraries: React, Angular, .NET, Redux, Node.js/Express
Developer Tools: Github, Visual Studio, VS Code, Jupyter Notebooks
DevOps & Containerization: CI/CD pipelines, Docker, Azure deployments
Security Practices: SonarQube, Azure Code Scan

EXPERIENCE

- Robert Half** Apr. 2023 – Present
Software Engineer Menlo Park, CA

 - **AI Agent Accelerator:** Co-leading the development of an enterprise-grade accelerator leveraging AI agents to orchestrate workflows that generate complex documents via certain user inputs, and internal and external resources, reducing processing time by 70% for critical business engagements.
 - **LLM Platform Leadership:** Co-architected an internal AI platform leveraging OpenAI's Assistants API and Semantic Kernel, enabling 15+ departments to create specialized agents and workflows. Implemented robust RAG systems that reduced information retrieval time by 60% for knowledge workers.
 - **Scalable AI Infrastructure:** Designed and deployed scalable Azure infrastructure supporting 900,000+ user interactions with 99.9% uptime.
 - **Enterprise System Integration:** Built fault-tolerant RESTful APIs and middleware connecting AI agents with legacy systems. Established secure authentication protocols and implemented comprehensive logging for AI-driven decision auditing across regulated business processes.
 - **Metrics-Driven Optimization:** Instrumented agent-based systems with telemetry capturing key performance indicators. Analyzed interaction patterns to optimize prompt engineering and agent orchestration, achieving 35% improvement in successful task completion rates.
- Software Engineer Intern* Jun. 2022 – Mar. 2023

 - Implemented major frontend updates for key internal applications using React and Angular, improving data tracking processes for business users.
 - Designed and executed a proof-of-concept for optimizing data lake migration between cloud services, achieving a 25% reduction in data transfer times through Azure DevOps pipelines and Azure Data Factory.
 - Actively participated in Agile team ceremonies, documenting comprehensive system architecture and API integrations to boost team collaboration and knowledge sharing.
- CodeLab** Feb. 2022 – May 2022
Software Developer Davis, CA

 - Developed a Git visualization web application that reduced the development cycle by 45%, leveraging modern JavaScript practices and interactive UI components built with React.
 - Produced thorough technical documentation and maintained clear API specifications to facilitate seamless collaboration and future scalability.
- Lawrence Berkeley National Laboratory** Jun. 2021 – Aug. 2021
Software Engineer Intern Berkeley, CA

 - Engineered a lossless compression/decompression algorithm that enhanced the transmission of temperature sensor data by 66%, utilizing time-series analysis for improved environmental monitoring data storage and transmission.

PROJECTS

Hybrid Recommendation Model Using LightFM | *Python, LightFM*

Aug. 2023 – Oct. 2023

- Developed a sophisticated hybrid recommendation engine, integrating historical user data and contextual location signals to deliver dynamic, personalized content.
- Leveraged Azure Machine Learning Studio for model training, achieving significant enhancements in personalization and user engagement metrics.
