EDUCATION

University of California, Davis
Bachelor of Science in Computer Science

Davis, CA
Sept. 2021 – March 2023

TECHNICAL SKILLS

Programming Languages: Python, C#, JavaScript, HTML/CSS
AI/ML Frameworks & Libraries: OpenAI APIs (Assistants, Responses, Agents), Semantic Kernel, Azure AI Agents
Cloud Platforms & Services: Azure Cloud, Azure DevOps, Azure AI Foundry, Azure ML Studio
Web Frameworks & Libraries: React, Angular, .NET, Redux, Node.js/Express
Infrastructure & DevOps: Docker, Kubernetes, CI/CD pipelines, Azure deployments, MLOps
Developer Tools: Git, Visual Studio, VS Code, Jupyter Notebooks
Data & Analytics: RAG systems, Vector databases, Time-series analysis
Security & Quality: SonarQube, Azure Code Scan, Authentication protocols, Audit logging

EXPERIENCE

- Robert Half** Apr. 2023 – Present
Software Engineer Menlo Park, CA

 - AI Agent Orchestration Platform (0-1):** Co-leading development of enterprise AI agent accelerator from scratch using Azure AI Agents, Microsoft Semantic Kernel, and OpenAI ResponsesAPI reducing processing time by 70% for critical business engagements through automated multi-agent collaboration.
 - Scalable LLM Infrastructure (0-1):** Co-architected internal AI platform enabling 15+ departments to create specialized agents. Implemented RAG systems with vector databases reducing information retrieval time by 60% while maintaining 99.9% uptime across 900,000+ user interactions.
 - Production ML Systems:** Built fault-tolerant RESTful APIs connecting AI agents with legacy systems. Established secure authentication protocols and audit logging for AI-driven decision tracking across regulated processes.
 - LLM Evaluation Systems:** Implemented LLM-as-judge evaluation framework for agent response quality assessment within multi-agent workflows, establishing automated quality gates and performance benchmarks for production deployments.
 - Performance Optimization:** Instrumented agent systems with telemetry and optimized prompt engineering strategies, achieving 35% improvement in task completion rates through data-driven analysis.
- Software Engineer Intern* Jun. 2022 – Mar. 2023

 - Implemented major frontend updates for key internal applications using React and Angular, improving data tracking processes and user experience for business stakeholders across multiple departments.
 - Designed and executed proof-of-concept for optimizing data lake migration between cloud services, achieving 25% reduction in data transfer times through Azure DevOps pipelines and Azure Data Factory optimization.
 - Actively participated in Agile team ceremonies, documenting comprehensive system architecture and API integrations to boost team collaboration and knowledge sharing across engineering teams.
- CodeLab** Feb. 2022 – May 2022
Software Developer Davis, CA

 - Developed Git visualization web application reducing development cycle time by 45% through interactive UI components built with React and modern JavaScript practices, improving developer productivity and workflow efficiency.
 - Produced comprehensive technical documentation and maintained clear API specifications to facilitate seamless team collaboration and ensure future system scalability and maintainability.
- Lawrence Berkeley National Laboratory** Jun. 2021 – Aug. 2021
Software Engineer Intern Berkeley, CA

 - Engineered lossless compression/decompression algorithm enhancing temperature sensor data transmission efficiency by 66% using time-series analysis techniques, improving environmental monitoring data storage and transmission for research applications.
